

Klingon D-7 Battle Cruiser

By Perry Bailey Copyright 1997, and 2000

1. Start with bill facing up fold in half, crease and unfold.

2. Fold the edges in to the center.

3. Fold two diagonals across the bill and a valley fold between the two x's.

4. Using the diamond formed by the 2 big x's swivel fold out the end of the bill as you fold it over.

5. Should look like this now, turn the model over.

6. Fold the long flap over.

7. Fold the edges into the center, while swivel folding over a little at the big end of the model.

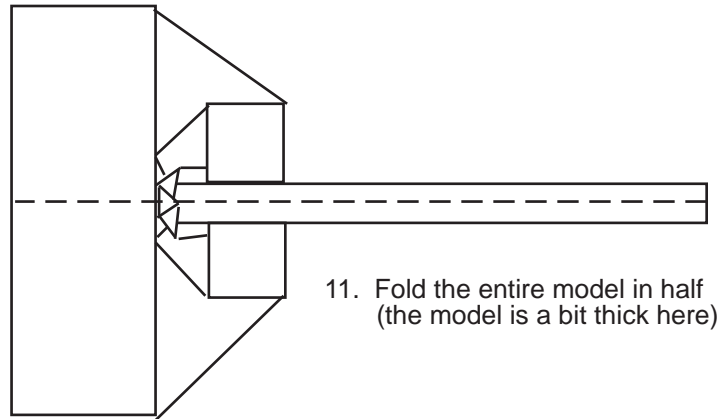

8. Fold the long flap over again.

9. Fold the long flap back over using the second layer of the bill for a landmark.

10. Fold the sides in again as you did in step 7. The next view is enlarged.

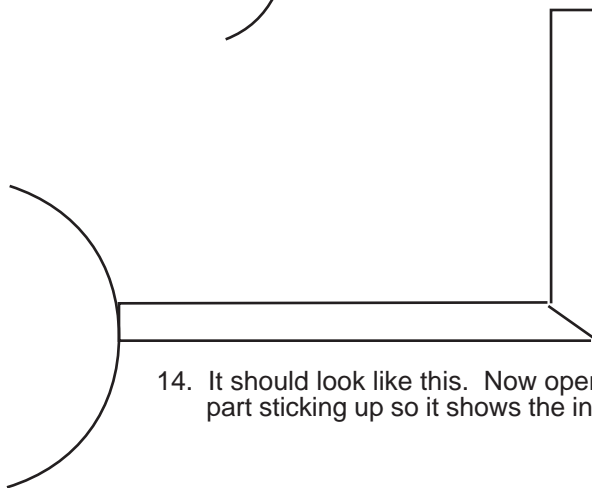

11. Fold the entire model in half (the model is a bit thick here).

12. Mark the half way point on the long flap, fold the flaps at the back up as shown. open the long flap at the bottom the next view is enlarged.

13. Fold up the long flap so it will flatten at 90 degrees.

14. It should look like this. Now open the part sticking up so it shows the inside.

15. From the side it looks like this.

16. From the front it will look like this. pull the first layers out to each side. Note at this point it ceases to be flat

17. Bring out the next layer, just like the previous layer, except now it brings the front back down in line with the rest of the model.

18. Fold the corners under a bit.

19. Fold the front end down a bit. here you can go either simple or complicate it by making it all match up so it is more box like at front.

20. Finished from on top

21. Finished from the side.
